

CORRIGENDA 7

Notes (extended for Corrigenda 3.1 and revised for 4, 5, 6 and 7):

1) Corrigenda entries that are new since version 6 have a 7 in the left-hand column, all other entries have their original corrigendum number shown; in instances where the entries have been corrected there may be an **R** beside the original Corrigenda number. **All new entries for Corrigenda 7 are completely in bold type and in red.**

2) The Corrigenda includes virtually no Addenda (these will be held for the next edition of the book); readers are reminded that the listing process, even if there is but one Editor with a deciding vote, involves several people. These people have other work and cannot be expected to help issue quarterly H&M updates dealing with recent descriptions of new taxa, let alone recent taxonomic revision. All such information is being collated for 'collegiate review', but a list of those held pending will appear periodically on a website *to be announced*. Reprints or PDFs should please be sent to Norbert Bahr, whose address appears below. All such contributions will lead to mention of the senders' names in our list of Acknowledgements.

Norbert Bahr e-mail: xenoglaux@t-online.de

3) Further corrections are due to work on dates (see p. 831) and this process will continue (as far as possible changing all relevant entries from the same original book or paper in the same issue of our Corrigenda);

4) Abbreviations herein include: AS for American spelling used for New World bird names and ES for English spelling used for the rest of the World.

5) Virtually no corrections to the range statements, other than spelling corrections, are included (these are held for the next Edition);

6) Changes shown below which correct entries in Peters Check-list are *usually* provided with a source in []; such sources will accompany new footnotes in H&M 4; where, in this Corrigenda, no source is stated we expect to research and provide the source.

7) However many changes for which no source is cited usually respond to errors in H&M 3 (some still 'carried forward' from H&M 1 or 2).

8) A word about brackets or parentheses in the context of authors' names and dates; in this list the message will always indicate if a bracket is to be added or if a bracket is to be deleted. Do not attach any importance to whether in the detailed Corrigenda entry such a bracket appears or does not appear. Unless addition or deletion is specified maintain the usage in the book.

A few words on the correction process. A) Dates of publication : Although perhaps some 300 date-corrections have been included since Corrigenda 1.2 bibliographic research is still on-going. Please do not imagine that the intent is to check the date of every taxon listed! There are just two threads to this process. First, when we know of published evidence that dates used in Peters Check-list were incorrect, and very often this is revealed by inconsistency between its volumes, then we try to ensure consistency based on the published evidence. In a few such cases we have had to dig for that evidence and we will be publishing such evidence so that it can be cited (this explains many cases where a change shown below is marked, for example, "[ECD in prep.]"). Second, we are working closely with Alan Peterson of zoonomen to agree on dates used and in that context we are all learning more and making changes that would not have been revealed otherwise. In summary all such work is triggered by knowledge of a problem, we are not going looking for more!

B) Names of authors: We continue to add initials where these are needed to clarify the author in question. Occasionally we are finding cases where there have been errors in past statements of authorship. In H&M 4 we shall reconsider the abbreviation of some authors' names. **C) Parentheses:** Changes to the bracketing of authors' names based on Art. 51.3.1 of the ICZN Code (1999), is now almost completed for known cases (after a listing of 'variant generic names'). Names introduced with variant spellings should not be shown with the author and date in parentheses. **D) Emendations:** Many cases of 'emendations' in specific names are being gathered for consideration: are they in fact mandatory corrections, justified emendations or unjustified emendations? Entries herein suggesting that earlier H&M spellings were incorrect and are now judged 'not in prevailing usage' are provisional.

		<p>Many people have provided input for these corrections, not least Alan Peterson with whom we collaborate for the mutual benefit of zoonomen and this list, and our grateful thanks go to them all. All helpers will be acknowledged by name in the next Edition of the book. As for Corrigenda 6 the draft of this was read by the same three careful helpers -- Normand David, Colin Jones and Daniel Philippe. Their assistance is greatly appreciated.</p>

(1991: 348) but under the name <i>dulangana</i> and repeated in Kennedy et al. (2000). In 1991 Art. 59b of the Code (ICZN, 1985) ruled <i>luzoniensis</i> and <i>mindorensis</i> permanently invalid; in 1999 Art. 59.3 (and the Example given) requires a judgement on whether the substitute name is in use. Watson in Peters (1986), under the 1985 Code, should not have used the names <i>luzoniensis</i> and <i>mindorensis</i> but did so: we thus have two concurrent usages. Watson (1986) has been followed in H&M 3, but perhaps should not have been. Application to the ICZN drafted.

3	696	<i>Cyornis turcosus turcosus</i> : author, Brüggemann not Brüggeman
4	697	<i>Cyornis rufigastra blythi</i> : name, must change to <i>simplex</i> Blyth, 1870 [error in Watson et al. Hist. 100 (4): 453-538.] But see below.
6	697	<i>Cyornis rufigastra blythi</i> : the above was written before fresh research was done on the names in <i>Ficedula hyperythra</i> (see above). With the benefit of that research my views have changed. Deignan (1947) did not identify <i>blythi</i> Giebel, 1875, as an available substitute name, and nor did Vaurie (1953: 535); the discovery of the availability of <i>blythi</i> Giebel is to the credit of Watson et al. (1986). This means that the 1986 rejection of <i>simplicior</i> Deignan, 1947, would be reversible if one wished to reverse it. But the rejection of <i>simplex</i> Blyth, 1870, is probably not now reversible and there is no apparent reason to reject the availability of Giebel's name since it antedates <i>simplicior</i> Deignan.
6	697	<i>Cyornis hyacinthus kuehni</i> : spelling, not <i>kuhni</i> [the original was <i>kühni</i>]
